# MORE THAN 50 YEARS OF EXPERIENCE

In 1967, Henning Saxe Hansen founded Saxe Group with a focus on injection moulding and extrusion. Through the years, the product range expanded with a large number of products for the manufacturing of plastic parts. The company started as a merchant business, in line with customer and development demands, and grew into a merchant, consulting and engineering company. Today, Saxe Group is still family owned and managed by an innovative and dynamic team. We are not just a machine supplier, but a highly skilled consulting company. We employ a number of high-qualified employees with various backgrounds, and the diverse experience and qualifications of our team ensure our customers a practical and theoretical approach to the tasks.

In response to the surge in orders and the imperative need for a strategic location to attract top talent to our ranks, we are proud to announce the expansion of our facilities. A state-of-the-art 3000 square meter production facility, complemented by a 500 square meter administration wing, stands as a testament to our continued growth and evolution. This augmentation not only bolsters our operational capabilities but also serves as a beacon, signaling our enhanced stature and capabilities to potential partners and customers alike.

Saxe Group consists of four companies, located in Denmark, Norway and Sweden. All companies have their own core competences, but are able to supply management and service for all group activities. The strength of this construction is to be able to deliver all pieces that make up the puzzle, which is essential for customer satisfaction.

## OUR MISSIONS

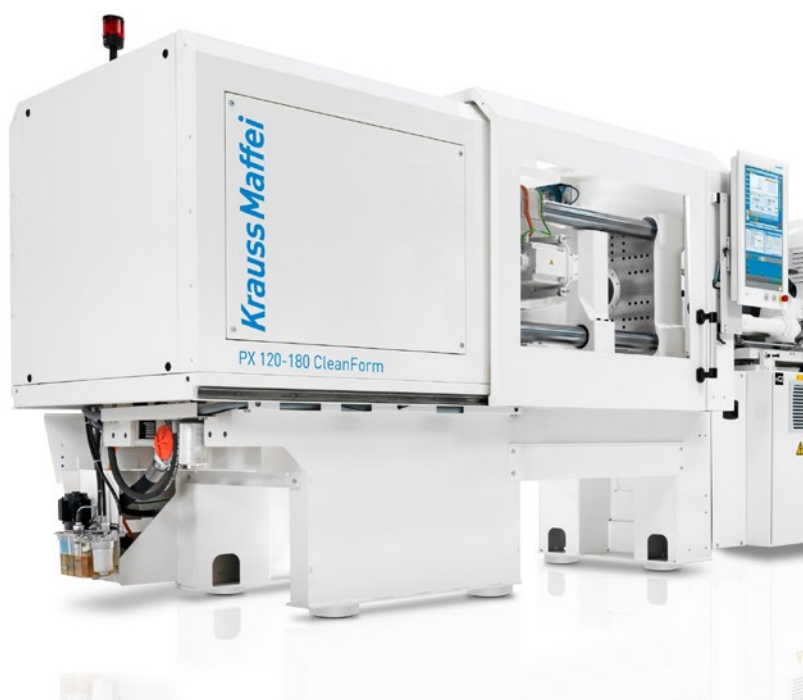

- ✓ Knowledge creates value
- ✓ Sharing competence
- ✓ Service creates value
- ✓ Strong supply chain

# AUTOMATION

We design and develop automation for all industries – with hundreds of automation and robotic solutions delivered worldwide. SAXE Group has delivered an array of systems to the plastics, pharmaceutical and food industries, including clean-room productions. For the food-packaging industry, SAXE Group offers linear high-speed takeout robots for parts handling and automation with IML (In-Mold Labelling).

We can incorporate complete packaging cells for packing products in boxes, on pallets or in cages. We have many years of experience in developing these customized solutions for your production.

## INJECTION MOLDING

SAXE Group specializes in high-quality injection molding machinery, committed to meeting the most demanding production requirements. With an unwavering dedication to refining and enhancing our machinery, we stand out as leaders in the field, exemplified by our partnership with KraussMaffei/Netstal Group.

Our continuous pursuit of improvement, development and machine optimization, combined with top-tier suppliers, sets us apart in the industry. Working closely with you, we identify the ideal machinery for your production facility, offering options at various price points to ensure maximum value for your investment.

# POLYURETHANE

With over 40 years of expertise, SAXE Group specializes in designing and manufacturing highly specialized machines and complete turnkey installations for polyurethane foam production. Our solutions cater to various industries, including furniture and automotive manufacturing, technical parts, cabinets and insulation for freezers and refrigerators. By integrating this technology with composites, the possibilities are limitless.

Our product portfolio includes a wide range of machinery and systems for polyurethane processing, including mixing heads, dosing machines, presses, die cutters, flexible cutting systems and foaming tools. Whether it's insulation applications or other tasks, we offer tailored solutions to meet your specific needs.

## SERVICE AND CALIBRATION

The SAXE Group service team consists of technicians with excellent technical skills and in-depth product knowledge. Our service team can help to ensure the proper installation process and that you receive the required assistance within the shortest possible response time.

Whether you need service or preventive maintenance, our service team is always ready to help. We perform calibration on all equipment on-site or on-line, and we are accredited according to ISO 17025 by DANAK.

## EXTRUSION

SAXE is able to supply and support equipment for nearly every segment of extrusion, from micro extrusion, sheet lines, blown film lines, pipe and profile lines to special lines for medical applications and recycling lines. The most important goal for SAXE Group is supplying our customers with complete, high-quality lines. It is only through our extensive network of extrusion equipment suppliers that this is possible.

We represent a variety of suppliers, mainly from Italy and Germany, where the extrusion technology was born. We deliver complete systems for pipe/profile, sheets, films, blown film, blow molding and manufacturing of medical tubing for special and complex applications.

## AUXILIARY EQUIPMENT

We deliver a wide variety of auxiliary equipment from a vast range of suppliers around the world. The products can be supplied as single, stand-alone units or as a part of the total delivery of a system. We are supplying material feeding systems, temperature controllers, dosing systems, dryers, granulators, conveyor belts, storage systems, molds and hot-runner systems, robots and post-treatment equipment.

**STÄUBLI**

## Enabling faster, easier and sustainable production

Digitalization and decarbonization will determine the future of production in all industrial sectors. With precise, safe, energy-efficient robot systems from Staubli Robotics, you can master these challenges and set new standards in productivity and sustainability.

We can also be smart, collaborative  
and mobile – put us to the test.
